Sample identification:		Preplant Fertilizer or Manure applied:		
Lab Number (do not use)	Sample Number	Preplant N	Manure applied:	
		lb/acre	type	rate (T/a or gal/a)

NOTES: The soil nitrate test for corn is calibrated for 0-12" soil samples collected when the plants are 6-12" tall. This usually means taking the samples in late May and early June. Our recommendations are not valid for samples that do not conform to these guidelines. Submit samples immediately, or keep them cool before submitting. Do not mail samples on Friday...the lab is not open on Saturday, and your samples will not be received until Monday.

**Submit samples to: ISU Soil Testing Lab  
G501 Agronomy  
Ames, IA 50011**
